Mux supposedly has internal protection diodes on Y+/-

Diagram illustrating the USB MUX (U7 NLA57242MUTBG) circuit. The MUX is connected to the USB D+ and D- lines, and its output is connected to the PI_USB_MUXED_D+ and PI_USB_MUXED_D- lines. The MUX is also connected to the SMC_USB_MUXED_D+ and SMC_USB_MUXED_D- lines. The MUX is powered by +3.3V and GND. The MUX is also connected to the USB_MUX_SEL line through a 10k resistor (R24). The MUX is also connected to the GND line through a 100nF capacitor (C23).
