

TX path (filter, no amplification) switched on when power is not applied

Components are selected for operation in the 868 MHz band. See README.md for other options.

Power with 3.3 V DC on P1A.

RX path (filter and amplification) switched on when power is applied

L2 unpopulated: DC is blocked on port P1B. Board is powered by P1A.

L2 populated: DC is passed through. Board can be powered by P1A or P1B.
