

ESP32-C3 requires power supply with at least 500 mA

Remark: LMR38020 is a more suitable alternative for the LMR16030, but it was not available as of 08/2022 due to chip crisis.

For a future 500 mA SMPS (after chip shortage) the PMEG10010ELRX can be re-used for D9 to reduce part variation.
