

If JP2 is LOW...

...and  
JP1 is...

...the I2C  
address is:

|      | LOW  | OPEN | HIGH |       |
|------|------|------|------|-------|
| 0xC0 | 0xC2 | 0xC4 | READ | WRITE |
| 0xC1 | 0xC3 | 0xC5 | READ | WRITE |

If JP2 is OPEN...

...and  
JP1 is...

...the I2C  
address is:

|      | LOW  | OPEN | HIGH |       |
|------|------|------|------|-------|
| 0xC6 | 0xC8 | 0xCA | READ | WRITE |
| 0xC7 | 0xC9 | 0xCB | READ | WRITE |

If JP2 is HIGH...

...and  
JP1 is...

...the I2C  
address is:

|      | LOW  | OPEN | HIGH |       |
|------|------|------|------|-------|
| 0xCC | 0xCE | 0xD0 | READ | WRITE |
| 0xCD | 0xCF | 0xD1 | READ | WRITE |

I2C Address Jumpers  
Default: High/High  
0xD0/0xD1

Control  
Signals

R3 sets current limit

$$R_{SENSE} = \frac{200mV}{I_{LIMIT}}$$

Default: 910mA
