USB/Serial Bridge

POWER SUPPLY: 5V

POWER SUPPLY: 3.3V

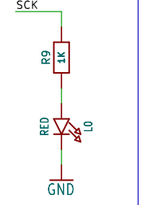

IO LEVEL SELECTION

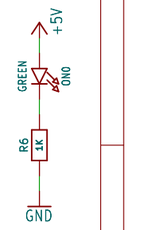

Default = 5V
Cut trace and solder to 3V3 to change

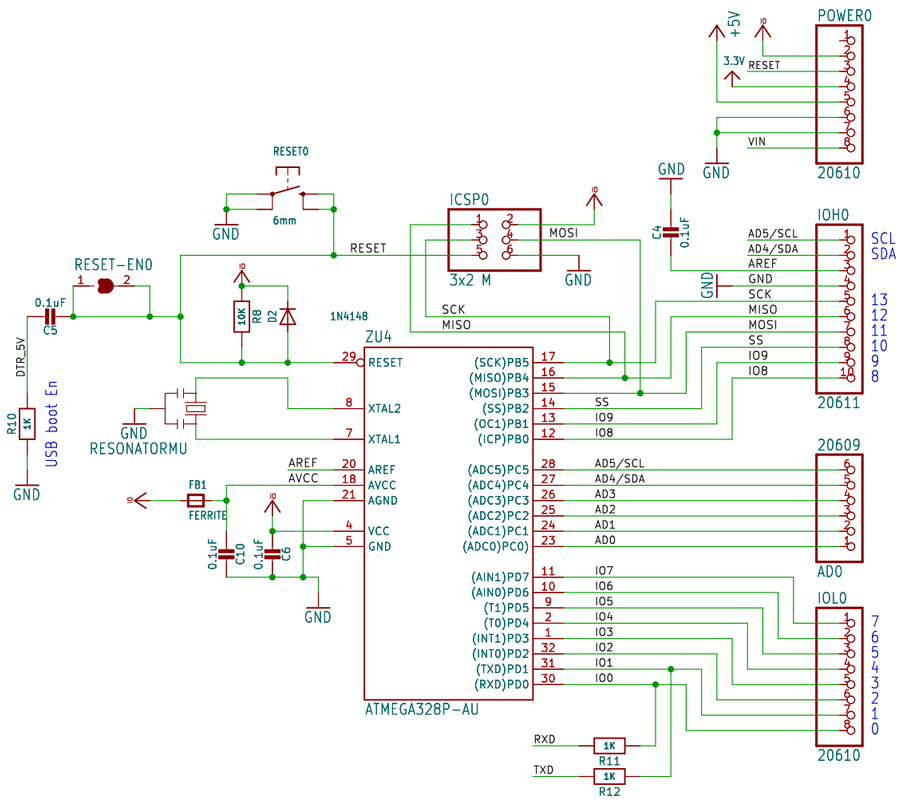

SCK LED

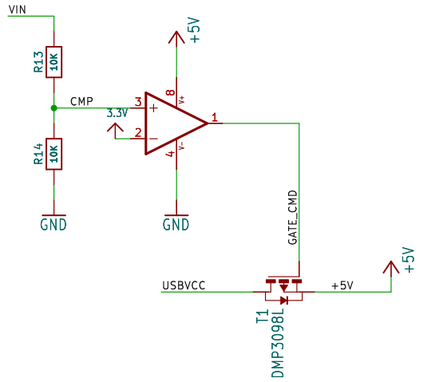

POWER LED

ATMEGA328 MCU

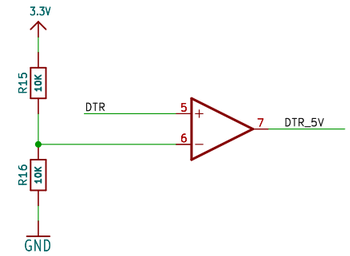

POWER SUPPLY SELECTION

RESET LEVEL SHIFTING (3V-->5V)

The CP2104 chip outputs 3.3V logic, but with CMOS logic this is right at the limit of logic high on a 5V device (5V*0.7=3.5V). If the temperature rises, the required transition level will increase and may fail in some situations.

Lots of room for BLAH BLAH BLAH notes
